

## We manage the project and the technology so you can focus on what you do best: winning your case.

CT Summation CaseVault is your full service solution for project management and online eDiscovery hosting. From expert consulting services, to document analysis and review, to production and offline integration, count on CaseVault and CT Summation CaseVault Services to help you work more effectively.

### FULL-SERVICE MANAGEMENT AND COMPREHENSIVE eDISCOVERY WORKFLOW

Now you can eliminate the challenges of managing your next eDiscovery project – let us do it for you.

We couple full service project management and litigation support consulting with easy access to multiple volumes of discovery through a centralized Web-based repository.

Built with the security of your sensitive data in mind, CT Summation CaseVault Services give you the flexibility to create and store multiple document collections and production sets while controlling access to each one.

Intuitive search tools allow you to conduct sophisticated searches across your entire case in an instant.

Plus, a Web-enabled platform makes it easy to work with distributed teams and outside parties, 24/7/365.

### LITIGATION MANAGEMENT

Leveraging a powerful SQL back-end, CT Summation's hosted solution CaseVault supports litigation involving millions of documents—no matter how large or dispersed your review team.

### EXPERT CLIENT SERVICES

Let our team of experts including lawyers, paralegals, and project managers, do all the organizational work for you. From project setup to project completion, CaseVault Services provide clients with a unique full service approach. We will advise you on best practices for eDiscovery and handle the details for you.

### SECURITY

Applies industry-standard, best practices to ensure safety and integrity of client data, with restricted access, source media duplication, automated virus scans and a world class data hosting facility. Employs evidence intake procedure with quality-control software that validates data integrity and prevents spoliation.

### QUALITY CONTROL

Uses a comprehensive, systematic plan to ensure data integrity, including automated and technician-controlled quality control checks throughout the process.

### DOCUMENT COLLECTIONS

Organize and manage all scanned image files and summary information—and control access to them. Host imaged documents, OCR, native files, eDiscovery and more.

## CASE EXPLORER

Navigate your entire case, data, and work product using a flexible set of expandable folders. You can define any number of folders, categories, and issues to organize your case in a way that makes sense to you and your review team.

## E-MAIL AND ELECTRONIC DOCUMENTS

Upload, search and cull eDiscovery including attachments. Review documents, produce them in their native formats, or convert them to image format for production.

## INTEGRATED SEARCHING

Search your entire case, including documents, OCR, transcripts, e-mail, production sets, notes, folders and more with a single command. Boolean search allows you to include and exclude specific information and pinpoint exactly the information that you want to find within a group of database records.

## ASSIGN DOCUMENTS TO ISSUES, CATEGORIES AND FOLDERS, AND APPLY REDACTIONS

Create and assign custom issues and categories for organizing evidence, allocate documents to specific folders, and perform online redactions that can be burned-in during production.

## CONTROL CONTENT

User login controls access to transcript and document collections while group-based permissions control access to annotations, folders, issues and categories.

## CASE MANAGEMENT

Use the case calendar to manage events and alerts, including the option to send e-mail notification to selected users.

## TRANSCRIPT COLLECTIONS

Manage all depositions and court transcripts. Take a real-time deposition, add notes and upload to CaseVault to share with designated users.

## PRODUCTION SETS

Create multiple online production sets combining paper-based documents, electronic documents and e-mail messages. Burn-in Bates stamps (with original or new numbers), redactions, endorsements and custom stamps. Production history is automatically linked upon creation of a production set.

## FLEXIBLE OUTPUT

Print directly to local printers or select the remote print vendor of your choice.

## INTEGRATION WITH CT SUMMATION IBLAZE AND MORE

Seamlessly connect CT Summation iBlaze to a document collection in CaseVault to view, search, annotate and briefcase for offline use. The similar case explorer interface allows iBlaze users to easily adapt to CaseVault.

## CT Summation CaseVault

### Strict Security. Robust Technology.

Designed with the strictest security measures available, CT Summation CaseVault is built on technology that meets the Department of Defense C-2 security rating and includes industry-standard SSL 128-bit encryption. Stringent firewall technology and flexible permission structures make it possible for you to control access to information.
